Software Engineer with 7+ years of experience building full-stack web applications with TypeScript, React, Angular, Ruby on Rails, NodeJs, GraphQL, and SQL. Delivered end-to-end product features across UI, APIs, and CI/CD for platforms serving 10k+ users and 20k+ monthly transactions. Interested in Software Architecture and AI Tooling.

Professional Experience

Software Engineer	RubiconMD (acquired by CVS Health, 2023)	October 2022 - Present
	Remote from Miami, Florida, U.S.	

Contribute across the stack using Angular, Ruby on Rails, and React Native, on a highly regulated software platform.

- Rebuilt the UI of our core product that handles 10k+ users and 20k+ transactions per month, refactoring legacy code with SOLID principles and Design Patterns while meeting 99.9% uptime.
- Lead the onboarding of a new team of engineers into our platform, guiding them through the architecture of our application and our unique git workflows, all while delivering a business-critical feature with zero delays.
- Implemented a feature flag system to hide in-progress features, enabling safe releases on mission-critical workflows, cutting the amount of reported bugs by 20%.
- Shipped full-stack features spanning DB migrations, GraphQL resolvers, and UI workflows, cutting handoff delays while maintaining 80%+ unit-test coverage.
- Turned PRDs into sprint-ready technical plans by defining API/data contracts, edge cases, and rollout strategy upfront, reducing blocker risk and carry-over work during implementation.
- Debugged production issues across client state, GraphQL requests, and SQL queries, improving observability by enriching Sentry reporting for GraphQL failures while filtering sensitive data.
- Owned feature delivery for a React Native application, mentored teammates on framework best practices, and built a CI/CD pipeline that replaced manual build generation with a faster, more reliable release process.
- Contributed to backend reliability by validating API behavior, query flows, and data consistency across new feature rollouts, reducing integration risk on critical workflows.
- Migrated the end-to-end test suite from Cucumber to Cypress, improving test stability through resilient selectors and request interceptors, cutting flaky CI failures by ~40%.
- Drove Cursor adoption by running hands-on training for 5+ engineers, increasing sprint velocity by 20% through faster implementation and debugging.

Skills: *TypeScript, JavaScript, Angular, Ruby on Rails, React, React Native, GraphQL, SQL, HTML, CSS, SASS, Nx Monorepos, Storybook, Jest, Cypress, PostgreSQL, AWS, Docker, CI/CD, CircleCI, GitHub, Sentry, Datadog, Agile Methodologies*

Software Engineer	Digital Media Solutions	December 2019 - October 2022
	Remote from Miami, Florida, U.S.	

Built lead generation products across multiple verticals in a high-traffic environment (200K+ weekly visits).

- Built 15+ multi-step lead-gen funnels with React, implementing Google Analytics, Google Tag Manager, and server-side conversion events, improving attribution for Google and Facebook Ads.
- Optimized landing page performance by reducing render-blocking work and tuning asset delivery, consistently hitting 90+ Lighthouse scores and improving funnel completion.
- Implemented privacy-compliant data capture patterns across lead flows by ensuring disclosures and proof of consent were always present, maintaining zero compliance incidents.
- Built a job board SPA with React and PHP that increased monetizable click opportunities, tracking

click-through performance end-to-end with reliable attribution/reporting.

- Planned out work with project managers, designers, and other engineers by dividing product requirement documents into well-scoped tickets, minimizing confusion and the need for last-minute changes during sprints.
- Collaborated with developers in a 3–4 engineer Scrum team through code reviews and implementation feedback, standardizing React and PHP patterns.

Skills: *TypeScript, JavaScript, React, PHP, HTML5, CSS3, Google Analytics, Google Tag Manager, Bitbucket, GitHub, Agile, CI/CD, SQL, PostgreSQL, Docker, Agile Methodologies*

Software Engineer

SAMA Labs

January 2019 - November 2019

Boca Raton, Florida, U.S.

Building ecommerce storefronts and landing pages with a focus on web performance, accessibility, and conversions.

- Shipped 10+ custom e-commerce sites on WordPress and Shopify by extending themes/templates (PHP, HTML/CSS, JavaScript), delivering pixel-accurate, production-ready storefronts with fewer revision cycles.
- Implemented conversion attribution and user analytics via Google Tag Manager by defining event schemas (add-to-cart, checkout steps, purchases) and ensuring tracking accuracy across common customer journeys.
- Delivered responsive acquisition pages and A/B-tested copy and layout variations, iterating quickly on experiments to improve funnel completion without sacrificing page performance.

Skills: *HTML5, CSS3, PHP, JavaScript, jQuery, Bootstrap, WordPress, Shopify, Google Tag Manager*

Education

- **BBA Information Systems, Florida International University**

Skills and Technologies

- **Programming Languages:** TypeScript, JavaScript, Ruby, PHP
- **Technologies:** Angular, React, NodeJs, Nestjs, Express, React Native, Rails, RxJS, Nx Monorepo, Storybook, Jest, Cypress, GraphQL, SQL, PostgreSQL, AWS, Docker, CI/CD, GitHub, Sentry, Datadog, VueJs, HTML5, CSS3, Sass
- **Methodologies:** Scrum, Agile, BDD
- **Interests:** Web Performance, Software Architecture, AI tooling, Developer Experience (DX)

Projects & Extra

- **YieldScout** - A real-estate investor deal-discovery app that surfaces estimated cash flow directly on map markers and list rows, so investors can spot cash-flowing properties without scrolling listing portals. Built with a React SPA and a NestJS API sharing a generated end-to-end tRPC type contract, backed by PostgreSQL and Drizzle ORM with Redis/BullMQ background workers, organized as a Turborepo monorepo. Vendor listing data is treated as an evictable cache rather than a system of record, saving a property copy as a frozen snapshot, so cache eviction can never touch user-owned data.
- **DataDrop** - A data management platform that allows admins to upload CSV datasets and share them with viewer users. Built with a React + Vite frontend and an Express + Drizzle ORM backend backed by PostgreSQL, organized as a Turborepo monorepo: <https://github.com/Danielmarchan/data-drop-headless>

Languages

- **English:** Native Proficiency
- **Spanish:** Native Proficiency
